Art Unit: 1714

The amendment received 10/19/06 has been made of record. Claims 33-35 and 42-44 are pending.

The indicated allowability of claims 32 and 36-41 contained in the previous office action is withdrawn upon further consideration of the prior art of record.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 33, 35, 42 and 43 are rejected under 35 U.S.C. 102(b) as being anticipated by GB '185.

GB '185 discloses PVC/elastomer blends as discussed in previous office actions. Applicants have previously argued that this reference teaches the combination of each of the polymeric components in latex form. This argument is revisited here.

GB '185 does state "the latex obtained in this invention and the polyvinyl chloride can be blended, and the resulting blend is subjected to salting out". Applicants arguments rely on this "salting out" step and other steps taught by the reference which are typically applied to latex formulations as support for their conclusion that both components must be in latex form at the time of mixing. It is the position of the examiner, however, that the language of the reference leaves open the possibility of the PVC being in dry form since it is being added to a latex which can result in the mixture being predominantly liquid and subject to process steps typically applied to a latex.

Art Unit: 1714

In the alternative, applicants' composition claims are not seen as distinguishing over the compositions of the reference even if the latter are limited in interpretation to a combination of two lattices.

In either case, the graft copolymer elastomer of the reference is seen as fulfilling the roll of polymeric processing aid in light of the definition of this component in instant claim 35.

Claims 33, 34, and 42-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Newman et al.

Newman et al disclose polymer blends produced by combining rubber latex with a dry particulate resin. The rubber may suitably comprise butadiene and acrylonitrile while the dry resin may be PVC (see example 11). The further addition of lubricant is disclosed.

While the lubricant may not be pre-added to the latex, no difference is seen in the resulting product.
